

## **Software Instruction Project**

You will work on your own, and the software you select, must be approved by me, before you can continue with the project.

Go to the student folder on your PC's and search the software you will use for this project. Your job will be to explain the software to the class. (This needs to be software that we don't use on a regular basis. Again, I must approve the software BEFORE you begin working on the assignment!)

### **Research the following items about your software:**

1. What is the purpose of the software?
2. What could it be used for?
3. Show the class the basics on how to use the software. (mini tutorial)
4. Assign the class a small project involving your software (approve your assignment idea with Mr. Philip before assigning)

### **For your presentation include:**

1. A presentation utilizing PowerPoint
2. A demonstration of the software
3. Handouts for the class covering the main ideas you discuss in the presentation.
4. Assignment for class. (provide clear directions for the assignment)

You will be given 3 days to work on this assignment. We will present our projects on Thursday, 9/14. Your assignment MUST be ready to present at the beginning of class on Thursday. We will not have time in class to work on it.

### **Notes:**

- You may not choose any of the Microsoft Office products as your software.
- You may use any other software on our computers that you are interested in learning about . Your assignment needs to be relevant to helping your classmates understand how to use the software more effectively.
- Your notes should be simple and easy to understand.

**Presentations are this Thursday!**
